

**Integration of a projector in the ceiling, a cabinet or a table, so the projector is out of sight and is less audible?**

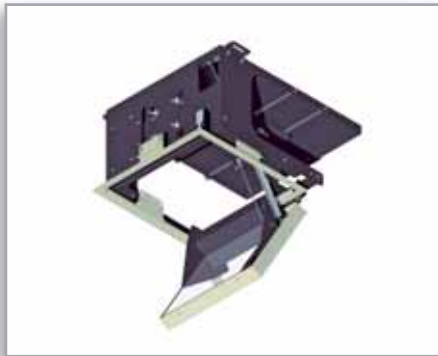

This idea can be realized with the Audipack Mirror-Kits. A practical and durable solution for the integration of a projector in a board room, home cinema, auditorium or conference hall. The projector is fixed permanently above the ceiling, resulting in a more silent presentation and invisibility of the projector.

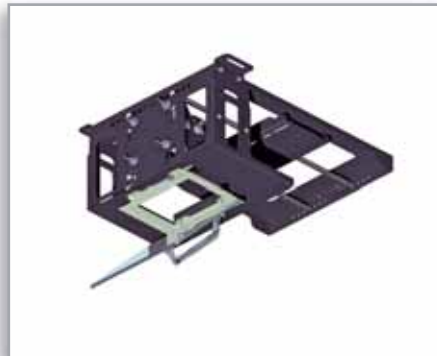

The minimized dimensions of the mirror panel do not distract and leave the attention with the projected image.

Audipack Mirror-Kits are available in various standard dimensions and versions. The Mirror-Kits are available in dynamic (motorized) and static (non-motorized) versions. Mirror-Kits are suited to dynamic installations, for example on board of yachts. All Mirror-Kits are easy to install and to adjust, and are equipped with mirrors of high optical quality. Custom built Mirror-Kits are available on request.
